

# Grier

*Abrasive Co., Inc.*

**Mounted Points  
for the Investment Cast Industry**

## Your Source for Points

At **Grier**, we like to think of ourselves as Points R Us. It is our specialty and our trademark. For over 35 years, **Grier Abrasive** has carried the distinctive reputation of being the producer of quality products within the **Investment Cast Industry**. Throughout the years, we have met the rigid requirements of aerospace, including those of the Shuttle Program. Our mounted points, a **Grier** specialty, are produced in a wide range of abrasive types and bond:

- Resinoid
- Vitrified
- Grier-Tex (cotton fiber)
- Grier Brite (unitized nylon abrasive)
- Grier Rub-Brite (rubber bond)

We have our mounted points certified annually to meet trace element standards. Order for order, the durability and high quality remains the same.

**Grier** has built its reputation for high standards, competitive pricing and on-time delivery. We intend to keep it that way.

## Your Source for Solutions

**Grier Abrasive** is considered by the industry to be more of a specialty job shop than a catalog house. Our specialty is the **Investment Cast Industry**. It is our focus. It is our investment. Many of our competitors have a "What we make is what you get" approach. But at **Grier**, it's "What you need is what we'll deliver." We will find the best abrasive and combination to meet your challenges.

Despite the diverse list of alloys, changing designs and cost constrictions, **Grier** remains creative, innovative problem solvers. Our **Reach-In** product line is a perfect example. It was designed to access those hard-to-reach areas including around corners.

Other **Grier** innovations:

- Longer stronger shanks
- Products for fine finishes
- Utilization of ceramic grain

For a safer operation, **Grier** understands that today's higher speed grinders demand greater care in matching the proper mounted point with the application. We take care in making sure each part works safely and synergistically.

We've also created ways to cut costs with better material removal and improved match of abrasives to alloys. Our SKU's now number well over twenty thousand. In many cases we already have what you need. If not, we will create it.

## Your Source for Support

Adaptability and cooperation are **Grier's** attributes. That's how we are able to support your success. We work closely with product managers to develop and deliver the best quality product. We interface with regular and integrated supply distributors, and support many different systems of in-plant distribution and accountability. We provide traceability of specialty lots of manufacture to our customers. And at your request, we'll work directly with your employees in your facility, observing line workers and discussing their needs, wants and desires. We also solicit feedback from engineers and

purchasing agents on what will improve operations and reduce costs. Based on these insights,

we go back and develop new parts that meet your company's needs. We then test these parts in your facility and record the on-line results.

To promote safety and efficiency, we offer classes on grinding and usage safety using **Grier** points. These classes improve quality of finish, streamline costs, increase morale and promote a safer environment.

From the ever innovating endeavors of our R & D department, to the personal touch and quick response of our investment cast technical support, **Grier** is a leader in the **Investment Cast Industry**. Our commitment to maintaining the necessary production levels and inventories, including millions of specialty spindles, allow us to meet the fluctuating demands of our industry.

*In Chicago Illinois, 1966, **Grier Abrasive Co., Inc.** set out to make its indelible mark in the investment cast industry. After 35 years of success, Grier moved to a 60,000 square ft facility in South Holland, Illinois. Equipped with new technology, state of the art kilns and nearly 120 personnel, Grier has established itself as an innovator and industry leader.*
